**Technical Features**

**MODEL TYPE**
Touchberry 7" & Tinkertouch 7

**Input Voltage**
12 to 24Vdc (±2.5%) (Polarity protection)

**Input rated voltage**
24Vdc

**Rated Power**
28 W

**I max.**
1.5A

**Size**
Check the Measures Table

**SRAM**
2/4/8 GB

**Communications**
I2C, Ethernet, USB (x4), RS485 (x2 HALF-Duplex), SPI, WiFi, Bluetooth, Serial TTL, RS-232, µSD, RTC

---

**General Features**

**Power supply voltage**
DC power supply: 12 to 24Vdc

**Operating voltage range**
DC power supply: 11.4 to 25.4Vdc

**Power consumption**
DC power supply: 28 W MIN.

**External power supply**
Power supply voltage: 24Vdc

**Insulation resistance**
20MΩ min at 500Vdc between the AC terminals and the protective earth terminal.

**Dielectric strength**
2,300 VAC at 50/60 Hz for one minute with a leakage current of 10mA max. Between all the external AC terminals and the protective ground terminal.

**Shock resistance**
80m/s² in the X, Y and Z direction 2 times each.

**Ambient temperature (operating)**
0º to 40ºC with Raspberry OS Lite

**Ambient humidity (operating)**
10% to 90% (no condensation)

**Ambient environment (operating)**
With no corrosive gas

**Ambient temperature (storage)**
-20º to 60ºC

**Power supply holding time**
2ms min.

**Weight**
1137 gr.

---

**Touch Screen Specifications**

**Technology**
Capacitive Touch Panel, 900 Nits. RTD2662 controller chip.

**Image Resolution**
1024 x 600

**Format**
16:9

**Size**
7"

**Display Technology**
TFT Type

**Screen Type**
IPS Display

---

**Pinout Scheme**

---
**Additional Specifications**

**Notes**

1. There are XXX on the reference number show:
   - First two characters are related to the expansion modules connected to the PLC unit and the RAM Memory model.
   - The third character is related to the CPU RAM memory space:
     - xxooo22xxxxx - 2GB RAM Memory
     - xxooo33xxxxx - 4GB RAM Memory
     - xxooo44xxxxx - 8GB RAM Memory
2. The analog inputs has a 3% of tolerance.

**I/Os Ranges**

- Analogic Input voltage: 0 - 10 Vdc.
- Analogic Input current: 4 - 20 mA.
- Digital I/Os voltage: 5 - 24 Vdc.
- Digital I/Os current: 250 mA.

**Main changes compared to previous versions**

- 5 Digital Outputs, 3 Digital Inputs and 2 Analog Inputs overall.
- New communications have been added: RS-485 HD/FT, RS232 and Serial TTL.
- The Screen is now Capacitive.

**x1 EXPANSION BOARD SLOTS**

Customize one additional communication expansion on your Panel PC and prepare your custom-made project.

**I/Os distribution**

Inputs:
- 3 Digital Inputs
- 2 Analog Inputs, configurable by jumpers to be:
  - 0 - 10 Vdc or 4 - 20 mA

Outputs:
- 5 Digital Outputs.
- Must be powered between 7.5-24 Vdc in its correspondent pins.

**Working with I/Os**

Interaction with I/Os is possible through Bash Scripts, Python Scripts and Terminal commands with easy syntax. Consult the User Guide for more information about this type of scripts.

**Screen Configuration Menu**

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brightness</td>
<td>Brightness can be adjusted in the Color Menu that can be accessed with the first button located behind the screen</td>
</tr>
<tr>
<td>Contrast</td>
<td>Contrast can be adjusted in the Color Menu that can be accessed with the first button located behind the screen</td>
</tr>
<tr>
<td>Saturation</td>
<td>Saturation can be adjusted in the Color Menu that can be accessed with the first button located behind the screen</td>
</tr>
<tr>
<td>Sound</td>
<td>Sound can be adjusted using the two last buttons located behind the screen</td>
</tr>
<tr>
<td>Sleep Mode</td>
<td>The screen can be put in Sleep Mode using the second button located behind the screen. Pressing the button again will wake up the screen</td>
</tr>
<tr>
<td>Display Port</td>
<td>The display port can be changed to HDMI or VGA using the middle button located behind the screen. Industrial Shields Panel PC does not support VGA connection as VGA port is not connected</td>
</tr>

**Panel PC Access**

How to access to the Panel PC’s Raspberry:

- **Linux users:** using ssh specifying the IP address: 10.10.10.20/24 (eth0).
- **Windows users:** we recommend to use PuTTY ssh client. The IP address have to be specified: 10.10.10.20/24 (eth0).

You can download the latest release of PuTTY here: https://www.chiark.greenend.org.uk/~sgtatham/putty/latest.html

---

**Warnings**

- Unused pins should not be connected. Ignoring the directive may damage the controller.
- Before using this product, it is the responsibility of the user to read the product’s User Guide and all accompanying documentation.
- Industrial Shields PLCs must be powered between 12Vdc and 24Vdc. If a higher voltage is supplied to the equipment can suffer irreversible damage.
- Maintenance must be performed by qualified personnel familiarized with the construction, operation, and hazards involved with the control.
- Maintenance should be performed with the control out of operation and disconnected from all sources of power.
- The Industrial Shields Family PLCs are Open Type Controllers. It is required that you install the Panel PC in a housing, cabinet, or electric control room. Entry to the housing, cabinet, or electric control room should be limited to authorized personnel.
- Inside the housing, cabinet or electric control room, the Industrial Shields PLC must be at a minimum distance from the rest of the components of a minimum of 25 cm, it can be severely damaged.
- Failure to follow these installation requirements could result in severe personal injury and/or property damage. Always follow these requirements when installing Panel family PCs.
- In case of installation or maintenance of the Panel PC please follow the instructions marked in the Installation and Maintenance section on the User Guide.
- Do not disconnect equipment when a flammable or combustible atmosphere is present.
- Disconnection of equipment when a flammable or combustible atmosphere is present may cause a fire or explosion which could result in death, serious injury and/or property damage.
- Inside the encapsulated, there are supercapacitors of 25F which can be dangerous. Be careful with them.

---

**UPS Shield**

This Panel PC has integrated an UPS Shield, a device which provides an anti-voltage drop protection system designed to avoid data corruption when the current is suddenly cut off.

**RTC**

This Panel PC has integrated the DS3231 Real Time Clock model which is powered by a button battery (CR1216 or CR1220).

**Outputs**

After a reboot/power disconnection and reconnection, the UPS will be activated and, until the device is fully initialized again (it will take some seconds), the outputs will maintain their last activation state. For more information about that consult the User Guide.
