

INDUSTRIAL SHIELDS

## M-DUINO PLUS FAMILY

M-Duino PLUS Family User Guide:

# Ethernet PLC User Guide

Revised March 2018

## Preface

This User Guide is been implemented by Boot & Work, S.L. working under the name Industrial Shields.

### Purpose of the manual

The information contained in this manual can be used as a reference to operating, to functions, and to the technical data of the signal modules, power supply modules and interface modules.

### Intended Audience

This User Guide is intended for the following audience:

- Persons in charge of introducing automation devices.
- Persons who design automation systems.
- Persons who install or connect automation devices.
- Persons who manage working automation installation.

#### Warnings:

- Unused pins should not be connected. Ignoring the directive may damage the controller.
- Improper use of this product may severely damage the controller.
- Refer to the controller's User Guide regarding wiring considerations.
- Before using this product, it is the responsibility of the user to read the product's User Guide and all accompanying documentation.

## Application Considerations and Warranty

### Read and Understand this Manual

Please read and understand this manual before using the product. Please consult your comments or questions to Industrial Shields before using the product.

### Application Consideration

THE PRODUCTS CONTAINED IN THIS DOCUMENT ARE NOT SAFETY RATED. THEY SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR ENSURING SAFETY OF PERSONS, AS THEY ARE NOT RATED OR DESIGNED FOR SUCH PURPOSES.

Please know and observe all prohibitions of use applicable to the products.

FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, NEVER USE THE INDUSTRIAL SHIELDS PRODUCTS.

NEVER USE THE INDUSTRIAL SHIELDS PRODUCTS BEFORE THEY ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Industrial Shields shall not be responsible for conformity with any codes, regulations or standards that apply to the combination of products in the customer's application or use of the product.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses may be suitable for the products:

- Systems, machines, and equipment that could present a risk to life or property.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installation subject to separate industry or government regulations.
- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.

At the customer's request, INDUSTRIAL SHIELDS will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the system, machine, end product, or other application or use.

## Disclaimers

### Weights and Dimensions

Dimensions and weights are nominal and they are not used for manufacturing purposes, even when tolerances are shown.

### Performance Data

The performance data given in this manual is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of INDUSTRIAL SHIELDS's test conditions, and the users most correlate it to actual application requirements. Actual performance is subject to the INDUSTRIAL SHIELDS Warranty and Limitations of Liability.

### Change in Specifications

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when features are changed, or published ratings or when significant construction changes are made. However, some specifications of the products may be changed without any notice. When in doubt, special numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your INDUSTRIAL SHIELDS representative at any time to confirm actual specifications of purchased products.

### Errors and Omissions

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

## Warranty and Limitations of Liability

### Warranty

Industrial Shields's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by Industrial Shields.

INDUSTRIAL SHIELDS MAKES NO REPRESENTATION OR WARRANTY, EXPRESSED OR IMPLIED, REGARDING MERCHANTABILITY, NON-INFRINGEMENT, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. INDUSTRIAL SHIELDS DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED

### Limitations of Liability

INDUSTRIAL SHIELDS SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

IN NO EVENT SHALL INDUSTRIAL SHIELDS BE RESPONSIBLE FOR WARRANTY, REPAIR OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS INDUSTRIAL SHIELDS'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## 1 General Description M-DUINO FAMILY product

### 1.1 Zone - Nomenclature

The nomenclature shown in this point will be used in the whole User Guide, so it is important to understand this nomenclature.

The nomenclature to differentiate the zones is based on the Alphabet, being A the shield from below and D the shield from above. Having a B and a C in the middle of them. It can have a minimum of 2 zones (A, B) and a maximum of 4 (A, B, C, D). The nomenclature is represented on the picture below:

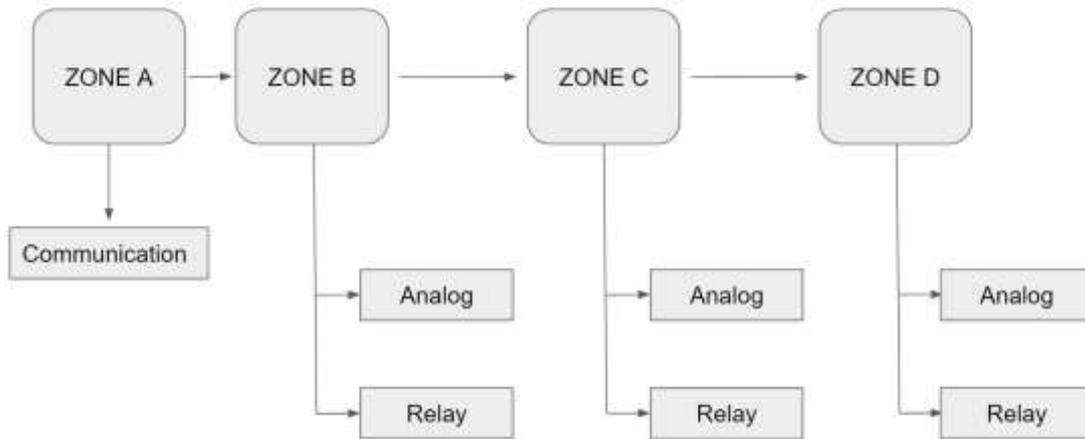

- The inputs in the zone B are named I0.X, being X any number suitable in the Shield. Outputs are named as Q0.X and relays as R0.X
- The inputs in the zone C are named I1.X, being X any number suitable in the Shield. Outputs are named as Q1.X and relays as R1.X
- The inputs in the zone D are named I2.X, being X any number suitable in the Shield. Outputs are named as Q2.X and relays as R2.X

### 1.2 Zone Distribution

A zone is completely common for every single M-Duino Family PLC. The rest of zones can have two different shields. The two shields that can be in every Zone (except for A Zone) are the Analog Shield or the Relay Shield. Only 1 Shield is allowed per Zone.

Depending on the combination that is made to build the PLC it can provide more Analog Inputs/Outputs or Relays Outputs. All the zones (B, C, D) can be one of the two Shields:

The distribution of the different features that provide the M-Duino Family is the following one:

| Shield        | B Zone   | C Zone   | D Zone  |
|---------------|--|--|---|
| Analog Shield | 13 Inputs<br>(13 Digital inputs,<br>6 of which can<br>work as Analog<br>Input)                       | 13 Inputs<br>(13 Digital inputs,<br>6 of which can<br>work as Analog<br>Input)                       | 11 Inputs<br>(11 Digital Inputs,<br>4 of which can<br>work as Analog<br>Input)                      |
| Relay Shield  | 8 Outputs<br>(8 Digital Outputs,<br>3 of which can<br>work as Analog<br>Output)                      | 8 Outputs<br>(8 Digital Outputs,<br>3 of which can<br>work as Analog<br>Output)                      | 6 Outputs<br>(6 Digital Outputs,<br>2 of which can<br>work as Analog<br>Outputs)                    |
|               | 6 Inputs<br>(6 Digital Inputs,<br>4 of which can<br>work as Analog<br>Input)                         | 6 Inputs<br>(6 Digital Inputs,<br>4 of which can<br>work as Analog<br>Input)                         | 6 Inputs<br>(6 Digital Inputs,<br>4 of which can<br>work as Analog<br>Input)                        |
|               | 11 Outputs<br>(8 Relay Outputs,<br>3 Digital Outputs,<br>3 of which can<br>work as Analog<br>Output) | 11 Outputs<br>(8 Relay Outputs,<br>3 Digital Outputs,<br>3 of which can<br>work as Analog<br>Output) | 9 Outputs<br>(7 Relay Outputs,<br>2 Digital Outputs,<br>2 of which can<br>work as Analog<br>Output) |

### 1.3 A Zone Features

| Shield               | A Zone  |
|----------------------|---|
| Communication Shield | (1x) Ethernet<br>(1x) USB<br>(1x) I2C<br>(3x) TTL<br>(1x) RS-232<br>(1x) HALF/FULL Duplex RS-485<br>(1x) SPI external Port<br>(1x) RTC<br>(1x) uSD Socket |

This is the list of our products depending on the combination of the shields. As it is already said above the A Zone is totally common for all the M-Duino Family.

| M-Duino   | B Zone                |       | C Zone |             | D Zone      |        |
|---|-----------------------|-------|--------|-------------|-------------|--------|
|   | Analog                | Relay | Analog | Relay       | Analog      | Relay  |
| M-Duino 19R+<br>M-Duino 21+   | X                     | X     |        |             |             |        |
| M-Duino 38R+<br>M-Duino 38AR+<br>M-Duino 42+  | X<br>X                | X     | X      | X<br>X      |             |        |
| M-Duino 50RRA+<br>M-Duino 53ARR+<br>M-Duino 53ARA+<br>M-Duino 57AAR+<br>M-Duino 57R+<br>M-Duino 58+ | X<br>X<br>X<br>X<br>X | X     | X      | X<br>X<br>X | X<br>X<br>X | X<br>X |

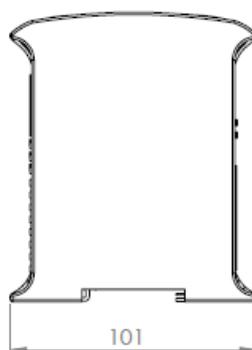

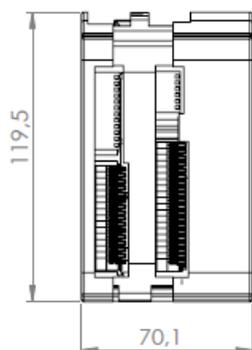

The nomenclature of the M-Duino Family products consists on placing the name of the Shield/s after the total number of I/Os of the product.

For example M-Duino53ARR+ is a PLC with the 3 extra Zones (B, C, D), which are Analog, Relay, Relay respectively. It has 53 I/Os.

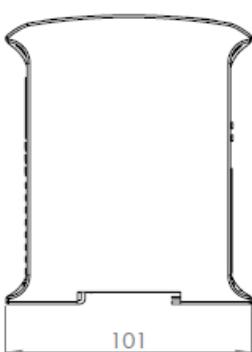

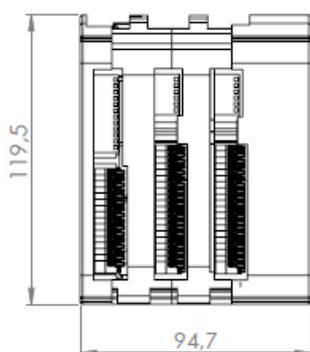

| M-Duino       | B Zone | C Zone | D Zone |
|---------------|--------|--------|--------|
| M-Duino53ARR+ | A      | R      | R      |

\* There are 2 different exceptions. M-Duino38R+/M-Duino57R+ should be called with this nomenclature M-Duino38RR+/M-Duino57RRR+, as everything is Relay it is omitted. Also for the M-duino21+/42+/58+ as they are all Analog they are not represented with this nomenclature. With the nomenclature represented in the User Guide they would be: M-Duino21A+/M-Duino42AA+/M-Duino58AAA+

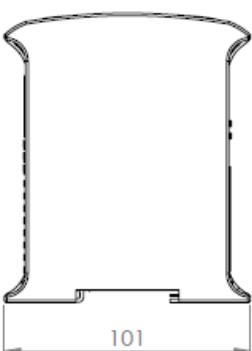

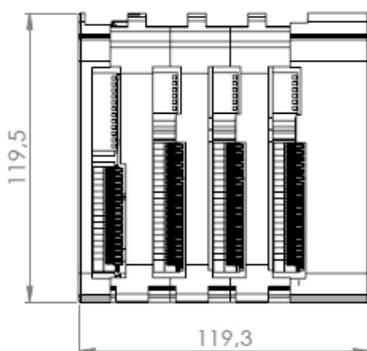

## 1.4 Mechanical dimension

M-Duino 1 BLOCK I/Os

M-Duino 2 BLOCKS I/Os

M-Duino 3 BLOCKS I/Os

| Dielectric strength             |                              | 2.300 VAC at 50/60 Hz for one minute with a leakage current of 10mA max. Between all the external AC terminals and the protective ground terminal. |                  |                    |
| Shock resistance                |                              | 80m/s <sup>2</sup> in the X, Y and Z direction 2 times each.   |                  |                    |
| Ambient temperature (operating) |                              | 0° to 45°C   |                  |                    |
| Ambient humidity (operating)    |                              | 10% to 90% (no condensation)   |                  |                    |
| Ambient environment (operating) |                              | With no corrosive gas  |                  |                    |
| Ambient temperature (storage)   |                              | -20° to 60°C   |                  |                    |
| Power supply holding time       |                              | 2ms min.   |                  |                    |
| Weight                          |                              | 445g max.  | 542g max.        | 850g max.          |

### 2.2 Performance Specification:

|                         |   |
|-------------------------|---|
| Arduino Board           | ARDUINO MEGA 2560   |
| Control method          | Stored program method   |
| I/O control method      | Combination of the cyclic scan and immediate refresh processing methods.  |
| Programming language    | Arduino IDE. Based on wiring (Wiring is an Open Source electronics platform composed of a programming language. "similar to the C". <a href="http://arduino.cc/en/Tutorial/HomePage">http://arduino.cc/en/Tutorial/HomePage</a> ) |
| Microcontroller         | ATmega2560  |
| Flash Memory            | 256KB of which 8KB are used by the bootloader   |
| Program capacity (SRAM) | 8KB   |
| EEPROM                  | 4KB   |
| Clock Speed             | 16MHz   |
| Clock Speed             | 16MHz   |

## 3 Precautions

Read this manual before attempting to use the M-Duino PLC and follow its descriptions for reference during operation.

### 3.1 Arduino Board

All M-Duino family PLCs include Arduino Mega Board as controller.

### 3.2 Intended Audience

This manual is intended for technicians, which must have knowledge on electrical systems.

### 3.3 General Precautions

The user must operate M-Duino according to the performance specifications described in this manual.

Before using M-Duino under different conditions from what has been specified in this manual or integrating M-Duino to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment and other systems, machines, and equipment that may have a serious influence on lives and property if used improperly, consult your INDUSTRIAL SHIELDS representative. Ensure that the rating and performance characteristics of M-Duino are sufficient for the systems, machines, and equipment, and be sure to provide the systems, machines, and equipment double safety mechanisms. This manual provides information for programming and operating the M-Duino.

## 4 Software interface

Industrial Shields PLC are programmed using Arduino IDE, which is a software based on the C language. They can also be programmed using directly C but it is much easier working with Arduino IDE as it provides lots of libraries that helps in the programming.

Industrial Shields provides boards for programming the PLCs much easier. Basically it is no needed to define the pins and if that pins are inputs or outputs. Everything is set up automatically if using the boards.

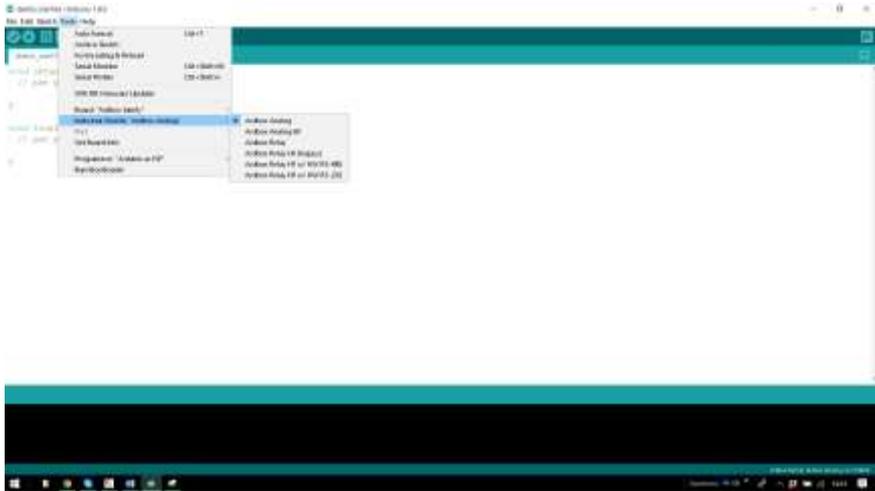

In order to install Industrial Shields boards, these are the steps that must be followed.

#### **Requirements:**

Arduino IDE 1.8.0 or above (better to have always the latest version).

Also there are some examples of programming in File -> Examples -> M-Duino Family.

Furthermore there are some extra libraries that can be found in Industrial Shields github.

<https://github.com/IndustrialShields/>

## 5 How to connect PLC Arduino to PC

- Connect USB port from PLC to PC.

**NOTE:**

M-Duino Family uses USB-B cable.

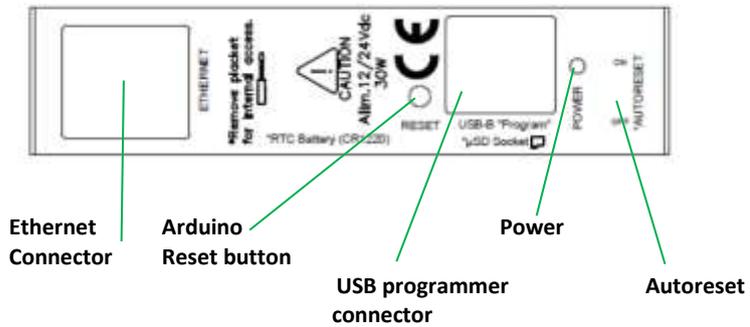

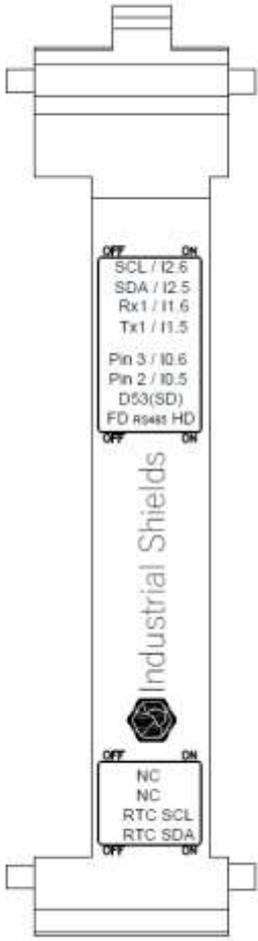

- Open Arduino IDE interface:
- Select Industrial Shields boards -> M-Duino Family

| Base<br>(common unit) |             |             |
|-----------------------|-------------|-------------|
| A Zone                |             |             |
| M-Duino Connector     | Arduino Pin | Function    |
| AREF                  | AREF        | Arduino PIN |
| IOREF2                | IOREF2      | Arduino PIN |
| IOREF1                | IOREF1      | Arduino PIN |
| 7Vdc                  | 7Vdc        | -           |
| GND                   | GND         | GND         |
| 3.3Vdc                | 3.3Vdc      | Arduino PIN |
| GND                   | GND         | GND         |
| 5Vdc                  | 5Vdc        | -           |
| GND                   | GND         | GND         |

*\*NOTE: Autoreset. Arduino mega has auto reset when using serial communication code. Set switch to OFF when using serial communication. When uploading code to Arduino Mega set switch to ON.*

## 7.2 B Zone

### 7.2.1 Analog Shield

## 8 Switch Configuration

### 8.1 A Zone: Communications

| LEFT ZONE    |               |       |              |       |
|--------------|---------------|-------|--------------|-------|
| Switch       | Analog Shield |       | Relay Shield |       |
|              | ON            | OFF   | ON           | OFF   |
| D ZONE       |               |       |              |       |
| SCL/I2.6     | I2.6          | SCL   | I2.1         | SCL   |
| SDA/I2.5     | I2.5          | SDA   | I2.0         | SDA   |
| C ZONE       |               |       |              |       |
| RX1/I1.6     | I1.6          | RX1   | I1.1         | RX1   |
| TX1/I1.5     | I1.5          | TX1   | I1.0         | TX1   |
| B ZONE       |               |       |              |       |
| Pin 3/I0.6   | I0.6          | Pin 3 | I0.1         | Pin 3 |
| Pin 2/I0.5   | I0.5          | Pin 2 | I0.0         | Pin 2 |
| uSD & RS-485 |               |       |              |       |
| D53(SD)      | Q2.0          | SD    | -            | SD    |
| FD RS-485 HD | HD            | FD    | HD           | FD    |

\*Although the Serigraphy of the Switches will only reference to the Analog Shields, if a Relay Shield is connected the IX.6 changes for IX.1 and the IX.5 changes for IX.0. Being X a value inside of [0..2].

4. SCL/I2.6: Choosing between SCL or the input I2.6. If this switch is ON, it enables the I2.6 input and disables the SCL. If this switch is OFF, it enables SCL and disables I2.6. If it is a Relay Shield I2.6 is changed for I2.1
3. SDA/I2.5: Choosing between SDA or the input I2.5. If this switch is ON, it enables the I2.5 input and disables the SDA. If this switch is OFF, it enables SDA and disables I2.5. If it is a Relay Shield I2.5 is changed for I2.0
2. RX1/I1.6: Choosing between RX1 or the input I1.6. If this switch is ON, it enables the I1.6 input and disables the RX1. If this switch is OFF, it enables RX1 and disables I1.6. If it is a Relay Shield I1.6 is changed for I1.0
1. TX1/I1.5: Choosing between TX1 or the input I1.5. If this switch is ON, it enables the I1.5 input and disables the TX1. If this switch is OFF, it enables TX1 and disables I1.5. If it is a Relay Shield I1.5 is changed for I1.0

4. Pin 3/I0.6: Choosing between Pin 3 or the input I0.6. If this switch is ON, it enables the I0.6 input and disables the Pin 3. If this switch is OFF, it enables Pin 3 and disables I0.6. If it is a Relay Shield I0.6 is changed for I0.1

3. Pin 2/I0.5: Choosing between Pin 2 or the input I0.5. If this switch is ON, it enables the I0.5 input and disables the Pin 2. If this switch is OFF, it enables Pin 2 and disables I0.5. If it is a Relay Shield I0.5 is changed for I0.0

2. D53(SD): If this Switch is OFF, it enables the Chip Select of the microSD socket and disables Q2.0. If this switch is ON, it enables the Q2.0 output. If the switch is in ON mode the microSD can't be used.

\*If the D Zone is an Analog Shield, Q2.0 is also related with D53. Being D53 in ON Mode the SD card MUST NOT be used because it can corrupt the microSD.

\*If the D Zone is a Relay Shield there is no problem and it can be set always to OFF. Q2.0 of the Relay Shield is related with D12, so it doesn't affect in any case to the microSD. The pin53 is not connected at all to any input/output, it is only connected to the uSD chip select.

1. FD RS-485 HD: Choosing between FD or HF. If this switch is ON, it enables the Half Duplex (HD) option and disables the FD. If this switch is OFF, it enables Full Duplex (FD) and disables HD.

| LEFT ZONE |     |     |
|-----------|-----|-----|
| SWITCH    | ON  | OFF |
| NC        | -   | -   |
| NC        | -   | -   |
| RTC SCL   | RTC | -   |
| RTC SDA   | RTC | -   |

1. RTC SDA: This switch enables the communication to communicate with the RTC using I2C. Having this switch in ON mode it activates this communication, whereas if it is in OFF mode it disables the I2C to reach the RTC.
2. RTC SCL: This switch enables the communication to communicate with the RTC using I2C. Having this switch in ON mode it activates this communication, whereas if it is in OFF mode it disables the I2C to reach the RTC.
3. NC: Not connected. This switch is not connected to anything, it doesn't matter if it is in ON mode or OFF mode.
4. NC: Not connected. This switch is not connected to anything, it doesn't matter if it is in ON mode or OFF mode.

## 8.2 Analog Shield

| B ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q0.7   | Q0.7 | A0.7 |
| Q0.6   | Q0.6 | A0.6 |
| Q0.5   | Q0.5 | A0.5 |

| C ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q1.7   | Q1.7 | A1.7 |
| Q1.6   | Q1.6 | A1.6 |
| Q1.5   | Q1.5 | A1.5 |

| D ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q2.7   | -    | -    |
| Q2.6   | Q2.6 | A2.6 |
| Q2.5   | Q2.5 | A2.5 |

For the Analog Shield if a switch is set to ON, it can only act as Digital Output. If it is set to OFF it can only act as an Analog Output.

If it is desired to use a Digital Output the pin must be set to ON and the pin that will provide this digital output is represented with QX.X, being X any number of the tables above.

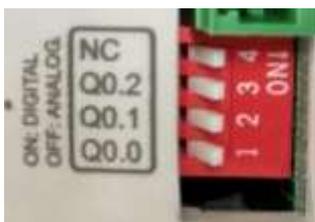

If it is desired to use an Analog Output the pin must be set to OFF and the pin that will provide this analog output is represented with AX.X, being X any number of the tables above.

## 8.3 Relay Shield

| B ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q0.2   | Q0.2 | A0.2 |
| Q0.1   | Q0.1 | A0.1 |
| Q0.0   | Q0.0 | A0.0 |

| C ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q1.2   | Q1.2 | A1.2 |
| Q1.1   | Q1.1 | A1.1 |
| Q1.0   | Q1.0 | A1.0 |

| D ZONE |      |      |
|--------|------|------|
| SWITCH | ON   | OFF  |
| NC     | -    | -    |
| Q2.2   | -    | -    |
| Q2.1   | Q2.1 | A2.1 |
| Q2.0   | Q2.0 | A2.0 |

For the Relay Shield if a switch is set to ON, it can only act as Digital Output. If it is set to OFF it can only act as an Analog Output.

If it is desired to use a Digital Output the pin must be set to ON and the pin that will provide this digital output is represented with QX.X, being X any number of the tables above.

If it is desired to use an Analog Output the pin must be set to OFF and the pin that will provide this analog output is represented with AX.X, being X any number of the tables above.

## 9 M-Duino Arduino I/Os 5V pins

The M-Duino has some of the Mega board pins available. These pins can be programmed according to Arduino features such as I/Os operating at 5V or any additional features present in the pins (for example I2C communication in pins SCL and SDA). As this pins are directly connected to the Arduino Mega board they are not as well protect as the normal inputs. These pins are mainly meant to be used as prototyping.

The Arduino board available pins are summarized in the table below. In order to access some of these pins the configuration switch must be set to OFF position (see section 8) and some extra considerations must be taken in consideration when using these pins.

| M-Duino terminal | Arduino pin | Enable Arduino pin        |
|------------------|-------------|---------------------------|
| SCL              | 21          | Communication switch: OFF |
| SDA              | 20          | Communication switch OFF  |
| RX0              | 0           |                           |
| TX0              | 1           |                           |
| RX1              | 19          | Communication switch: OFF |
| TX1              | 18          | Communication switch: OFF |
| MISO             | 50          |                           |
| MOSI             | 51          |                           |
| SCK              | 52          |                           |
| Pin 3            | 3           | Communication switch: OFF |
| Pin 2            | 2           | Communication switch: OFF |

**\*IMPORTANT:** Do not connect the terminals in the chart above to voltages higher than 5V.

These terminals provide direct access to the Mega board.

A part from the switch configuration there are some special conditions depending on these 5V. Now it is going to be shown the considerations to operate with these pins.

### 9.1 I2C pins – SDA/SCL

The I2C protocol is meant to work in a pull-up configuration. A pull-up configuration means that when the pin is at rest (nothing connected to it) it always reads a HIGH value. In this case it reads 5V when nothing is connected. The pull-up configuration is established by default in these pins.

If it is meant to work them as a GPIO at 5V, it has to be considered that they are pull-up inputs.

\*IMPORTANT: I2.5 & I2.6 are not pull-up inputs although they are referred to the I2C pins (switch configuration). There is a “reverse pull-up circuit “that is established in order to have the same behaviour as the other inputs.

## 9.2 Serial 0 – RX0/TX0

The Serial0 protocol can work also as a 5V pin. These pins should be used ultimately, only in case that all the 5V pins are already performing a function. This is because they are shared with the USB interface. If using these pins, the USB communication cannot be working at the same time. When the PLC is not installed, the USB communication is normally required for debugging, uploading and intercommunicating with the Ethernet controller. If using both interfaces at the same time the Arduino board will get blocked.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established an external pull-up or pull-down circuit in order to correctly work with these pins.

## 9.3 Serial 1 – RX1/TX1

These pins are only referred to the inputs I1.5/I1.6. If the switch configuration is in OFF position the pins RX1/TX1 will be available. If not using the Serial 1 interface these pins can work as digital, either input or output.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established an external pull-up or pull-down circuit in order to correctly work with these pins.

## 9.4 SPI – MISO/MOSI/SCK

These pins can only work as a 5V pins if the Ethernet protocol is not going to be used. As the Ethernet protocol uses the SPI to communicate with the Arduino board, both behaviours cannot happen at the same time as the Ethernet would not work.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established an external pull-up or pull-down circuit in order to correctly work with these pins.

## 9.5 Pin 2/Pin 3

These pins are only referred to the inputs I0.5/I0.6. If the switch configuration is in OFF position the pins Pin 2/Pin 3 will be available.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established an external pull-up or pull-down circuit in order to correctly work with these pins.

# 10 A Zone Features: Communications & RTC & uSD

## 10.1 RS-232

The Arduino Mega function code to access the RS-232 port in the M-Duino is Serial2 (pins 16 and 17 of the Arduino Mega).

For the RS-232 communication protocol there isn't any switch that affects it. So it does not matter the configuration of the switches to implement a RS-232 communication.

Using the boards of Industrial Shields, there is a library that simplifies the RS-232 implementation.

## 10.2 RS-485

For RS485 communication protocol the defined Arduino Mega pins are showed in the chart below.

| Function | Arduino Pin |
|----------|-------------|
| DI       | 14          |
| RO       | 15          |
| RE       | 11          |
| DE       | 46          |

For the RS-485 communication protocol there is only one switch that affects in this communication. The RS-485 protocol will be always enabled, the only switch that affects is the one called "FD rs-485 HD" (See Section 8). This switch makes the choosing between RS-485 Half Duplex or RS-485 Full Duplex (RS-422).

Using the boards of Industrial Shields, there is a library that simplifies the RS-485 implementation.

## 10.3 I2C

I2C communication **DOES NOT REQUIRE** a pull-up resistor for the M-Duino Family. The pull-up resistor is already implemented in the PCB.

I2C communication is configured by switches, so the switches must be configured in order to enable the I2C communication.

| Switch   | Analog Shield |     | Relay Shield |     |
|----------|---------------|-----|--------------|-----|
|          | ON            | OFF | ON           | OFF |
| D ZONE   |               |     |              |     |
| SCL/I2.6 | I2.6          | SCL | I2.1         | SCL |
| SDA/I2.5 | I2.5          | SDA | I2.0         | SDA |

To enable I2C the switches SCL/I2.6(I2.1) & SDA/I2.5(I2.0) must be set to OFF mode. In this mode the inputs are totally disabled and the I2C is now enabled.

Industrial Shields does not provide any library to implement the I2C as it can be used the standard library of Arduino called Wire.

## 10.4 SPI

The M-Duino pins used for the SPI bus are summarized in the table below. For SPI bus MISO, MOSI and CLOCK pins are common to all the connected devices to the M-Duino, conversely, each of the connected devices will have a single and dedicated SS pin.

| Function | M-Duino connection                        | Mega board pin            |
|----------|---|---------------------------|
| MISO     | 50 S0                                     | 50                        |
| MOSI     | 51 SI                                     | 51                        |
| CLOCK    | 52 SCK                                    | 52                        |
| Reset    | Reset                                     | Reset                     |
| SS       | SCL/SDA/RX0/TX0/RX1/TX1/RX3/TX3/Pin2/Pin3 | 21/20/1/0/19/18/15/14/2/3 |

Check the switch configuration at section 8 to enable SS pins.

## 10.5 TTL

M-Duino has two TTL ports, RX0/TX0, RX1/TX1. TTL0 is accessed with the function Serial (pins 0 and 1 of the Arduino Mega). TTL1 is accessed with the function Serial1 (pins 18 and 19 of the Arduino Mega).

In order to use the TTL pins the configuration of the switches have to be the following one:

| Switch   | Analog Shield |     | Relay Shield |     |
|----------|---------------|-----|--------------|-----|
|          | ON            | OFF | ON           | OFF |
| C ZONE   |               |     |              |     |
| RX1/I1.6 | I1.6          | RX1 | I1.1         | RX1 |
| TX1/I1.5 | I1.5          | TX1 | I1.0         | TX1 |

If the switches RX1/I1.6(I1.1) & TX1/I1.5(I1.0) are in OFF mode, the RX1/TX1 will be enabled. In order to use TTL3 these switches must be in OFF mode.

## 10.6 Ethernet

M-Duino Ethernet port controller is based on w5500 IC, which is the compatible IC compatible with Arduino Ethernet2 Shield libraries. All Ethernet shield Arduino libraries are compatible with the M-Duino. In the M-Duino, W5500 IC communicates to the Mega board via SPI bus (SS Arduino Mega pin 10).

## 10.7 RTC

M-Duino RTC Module is based on the DS1307 Chip. This chip works with the I2C protocol communication, so it is required to have enabled the I2C protocol.

4 switches have to be configured in order to enable the RTC features:

| LEFT ZONE |     |     |
|-----------|-----|-----|
| SWITCH    | ON  | OFF |
| NC        | -   | -   |
| NC        | -   | -   |
| RTC SCL   | RTC | -   |
| RTC SDA   | RTC | -   |

RTC SCL & RTC SDA must be set to ON mode to enable the I2C wires to the RTC. If they are in OFF mode, the Arduino won't communicate with the RTC.

| Switch   | Analog Shield |     | Relay Shield |     |
|----------|---------------|-----|--------------|-----|
|          | ON            | OFF | ON           | OFF |
| SCL/I2.6 | I2.6          | SCL | I2.1         | SCL |
| SDA/I2.5 | I2.5          | SDA | I2.0         | SDA |

I2C must be enabled in order to communicate with the RTC. See section 11 I2C to enable it.

Using the boards of Industrial Shields, there is a library that simplifies the RTC implementation called RTC.

## 10.8 uSD

The micro SD uses the SPI communication to interact with the Arduino Mega. The SPI protocol is always enabled, as there are no switches that configure it. However, there is a switch that must be placed to ON mode in order to communicate with the uSD:

D53(SD): If this Switch is OFF, it enables the Chip Select of the microSD socket and disables Q2.0. If this switch is ON, it enables the Q2.0 output. If the switch is in ON mode the microSD can't be used.

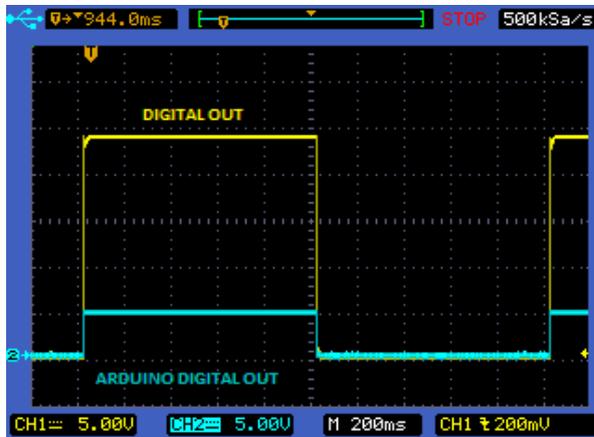

The uSD socket is found in the TOP part of the communication Shields, so in the frontal part of the PLC, it is required to open the plastic found in the frontal part and the socket is located under the supply of the Arduino.

| LEFT ZONE |               |         |              |         |
|-----------|---------------|---------|--------------|---------|
| Switch    | Analog Shield |         | Relay Shield |         |
|           | ON            | OFF     | ON           | OFF     |
| uSD       |               |         |              |         |
| D53(SD)   | Q2.0          | D53(SD) | -            | D53(SD) |

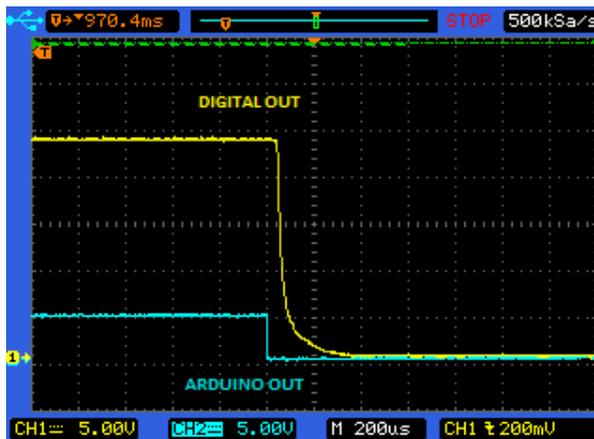

Using the boards of Industrial Shields, there is a library that simplifies the uSD implementation called SD. It is the same as the Arduino library, with the only modification of using the pin 53 to select the Chip Select of the uSD chip.
